Subject: Larval study ring testing

Hi Tom,

Industry has had a couple of meetings recently regarding ring testing of the improvements Jamie Ellis et al have proposed to the Aupinel method for the 22-d study. The hope is that we can get the protocol from Jamie sometime in July or August as we have to wait for it to finish the review process for publication. CROs indicated that they could likely get at least one study in later this year to test the method improvements. It was suggested that you and/or other scientists at EPA be involved in the process so that the data coming out doesn't become or be seen as biased but also to see the data as they become available for awareness of lab success/failure. If you or others at EPA are interested in being involved in future discussions, I can add you in to the meeting requests and email exchanges.

Regards,

Jay
